**EcoCloud**

**The sustainability  
platform for carbon  
management**

# **Carbon Footprinting with myclimate**

**The myclimate EcoCloud is an innovative sustainability software for customised recording, analysis and evaluation of sustainability data and integrated carbon management. It provides a sound basis for creating sustainability reports. And supports companies throughout the entire process, from the dual materiality analysis to the implementation of measures and progress monitoring.**

### Functions of the myclimate EcoCloud

With the myclimate EcoCloud, myclimate offers companies an innovative software solution for the individually tailored recording, analysis and evaluation of sustainability data. With many years of expertise and qualified

consulting, myclimate supports companies in fulfilling modern sustainability reporting requirements on their path to net zero. These functions are integrated into the myclimate EcoCloud:

Prepare a carbon footprint (Scope 1, 2 and 3)

Implement and document ESRS double materiality analysis

In-depth and intuitive analysis of emissions data

Define and track reduction and sustainability goals

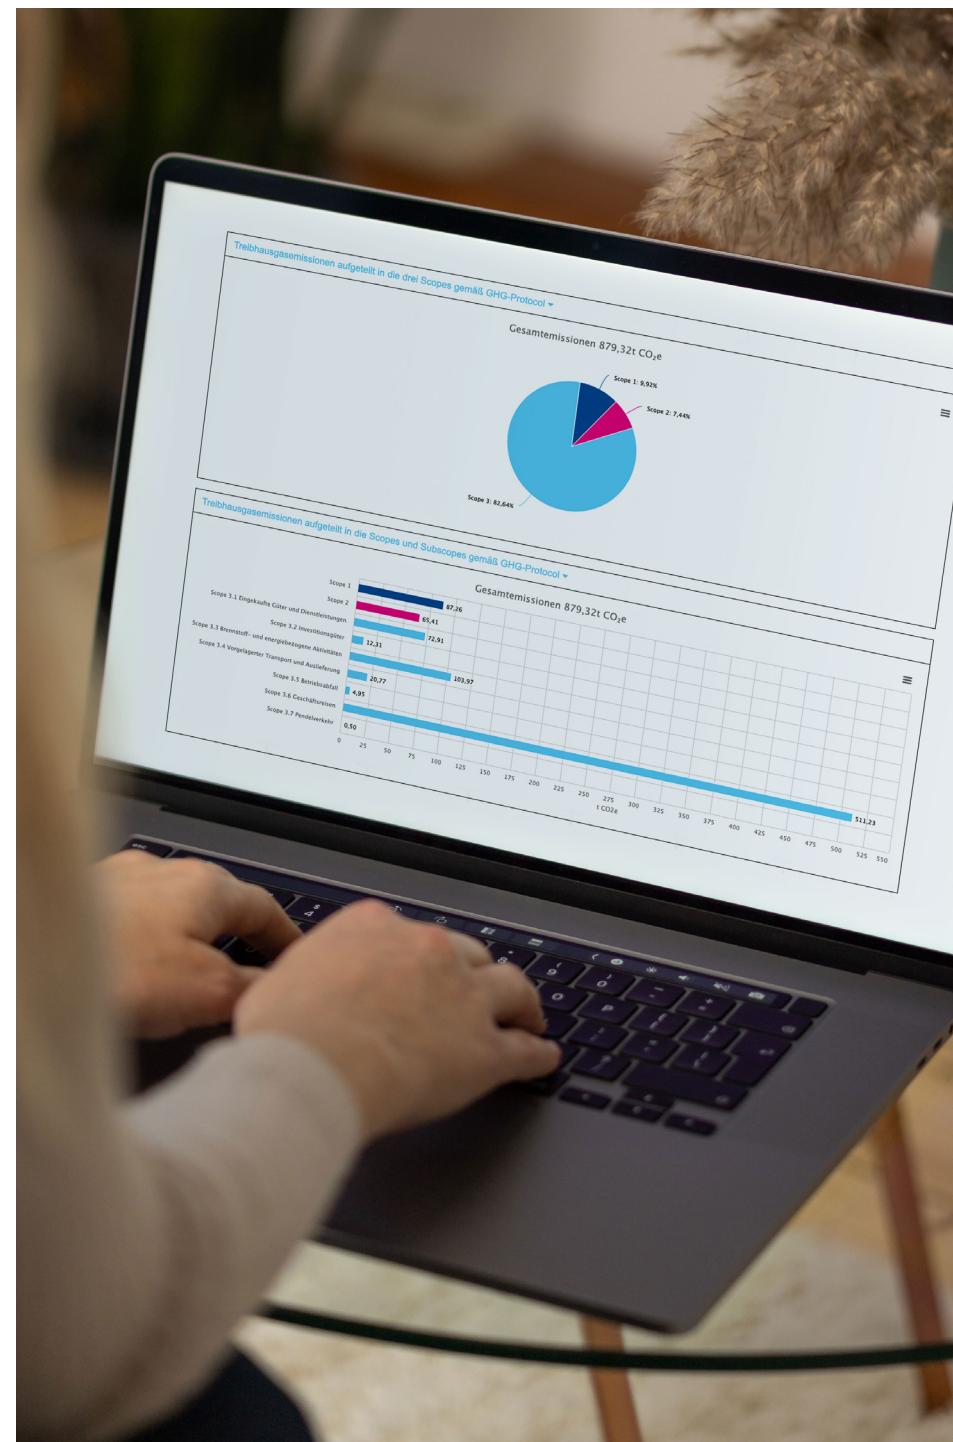

Prepare customised data and reporting in line with international standards (GHG Protocol, ESRS)

Integrate with existing IT systems

## Your benefits at a glance

- **Developed with years of expertise and scientifically reviewed data:** This innovative ESG platform, developed by software experts and the myclimate team, is based on scientific and well-founded sustainability data and is specifically designed to meet current and future market requirements.
- **A state-of-the-art ESG platform:** Thanks to its modern technical architecture, myclimate EcoCloud is characterised by the ability to automate processes, options for various API connections and flexible further development in line with market requirements.
- **Comprehensive data preparation and analysis:** Complex indicators such as greenhouse gas emissions can be calculated using different scopes and clear monitoring of data.
- **Close collaboration with myclimate experts:** myclimate's experts and their network of partners provide you with competent advice based on their in-depth knowledge of environmental sustainability issues.
- **Modular configuration and expansion:** The platform can be flexibly adapted and expanded for individually tailored data collection and reporting in line with all currently relevant standards.
- **High level of data protection:** Storing data on servers in Switzerland guarantees a high level of data security that complies with GDPR requirements.

# Let us advise you individually:

Contact us for comprehensive consultation on the myclimate EcoCloud and find out how we can support you with our many years of expertise on the following and other topics:

- Carbon footprinting for Scope 1, 2 und 3
- Development of emissions reduction targets & measures
- CSRD-Consulting
- Science Based Targets Initiative (SBTi)
- Climate strategy consulting
